INTRODUCTION

The Peak Hour Report is a list of design hour factors (K and D) calculated from and including the highest 200 hours of hourly traffic volume collected from Automated Data Collection (ADC) sites being monitored during the previous complete year.

This year's report is comparable to years past. It shows the Annual Average Daily Traffic (AADT) volumes in normal growth trends. It also shows where volumes of traffic are causing congestion within rural and urban areas around the state.

Typically, each site is represented by two graphs within the site data section of this report.

The first of the two graphs--K FOR PEAK 200 HOURS of 2015--represents the top highest two hundred hours in descending order. (As volumes increase, the "K" value decreases).

The second of the two graphs--D % IN THE PEAK 200 HOURS of 2015--represents the highest directional volume.

If there is not a graph showing the "D-factor" percentage, no data was available for the opposing direction of travel at that particular site.

K Factors = A peak hour traffic volume divided by the Annual Average Daily Traffic (AADT)
for each ADC location, without regard to direction, i.e.
K Factor = Highest Peak Hour-- traffic volume hour divided by the AADT.
K30 Factor = 30th Peak Hour-- traffic volume hour divided by the AADT.

D Factor = Highest directional volume percentage for the 30th peak hour.
D Factors for all other peak hours are available by request.

COMMON USES:

Peak Hour report may be used when determining traffic patterns
Peak Hour Report is used for determining projected and estimated traffic volumes
Peak Hour Report is used for project design purposes by planning and engineering offices (state, county, city and private).

EXECUTIVE SUMMARY

The Washington State Department of Transportation is responsible for over seven thousand miles of state highways. This responsibility creates large expenditures for designing, planning, constructing and maintaining. It requires reliable data collection and reporting of vehicle volumes, classification types, speeds, travel trends and highest volume-hours throughout the state.

The *Peak Hour Report* is a compilation of multi-directional data containing the top volume-hours for the year at the Automated Data Collection sites around the State of Washington. The report summarizes the top two hundred **volume-hours** for the year by site and by direction on any given state highway.

The *Peak Hour Report* is used as a tool for estimating future **design hour volume** of traffic. This information is used by traffic, design, planning and other engineers to design highway features.

Typically, the “K-30” & “K-100” (30th and 100th peak hour factors) are used by engineering for highway design, however the “D100” and “K200” are included within this report, which in past years were only given if the site was determined to be a recreational thoroughfare. Also, this report includes the “D” factor, which represents the proportion of peak hour traffic traveling in the peak direction. (Please see Glossary for explanation of the different types of “K-factors.”)

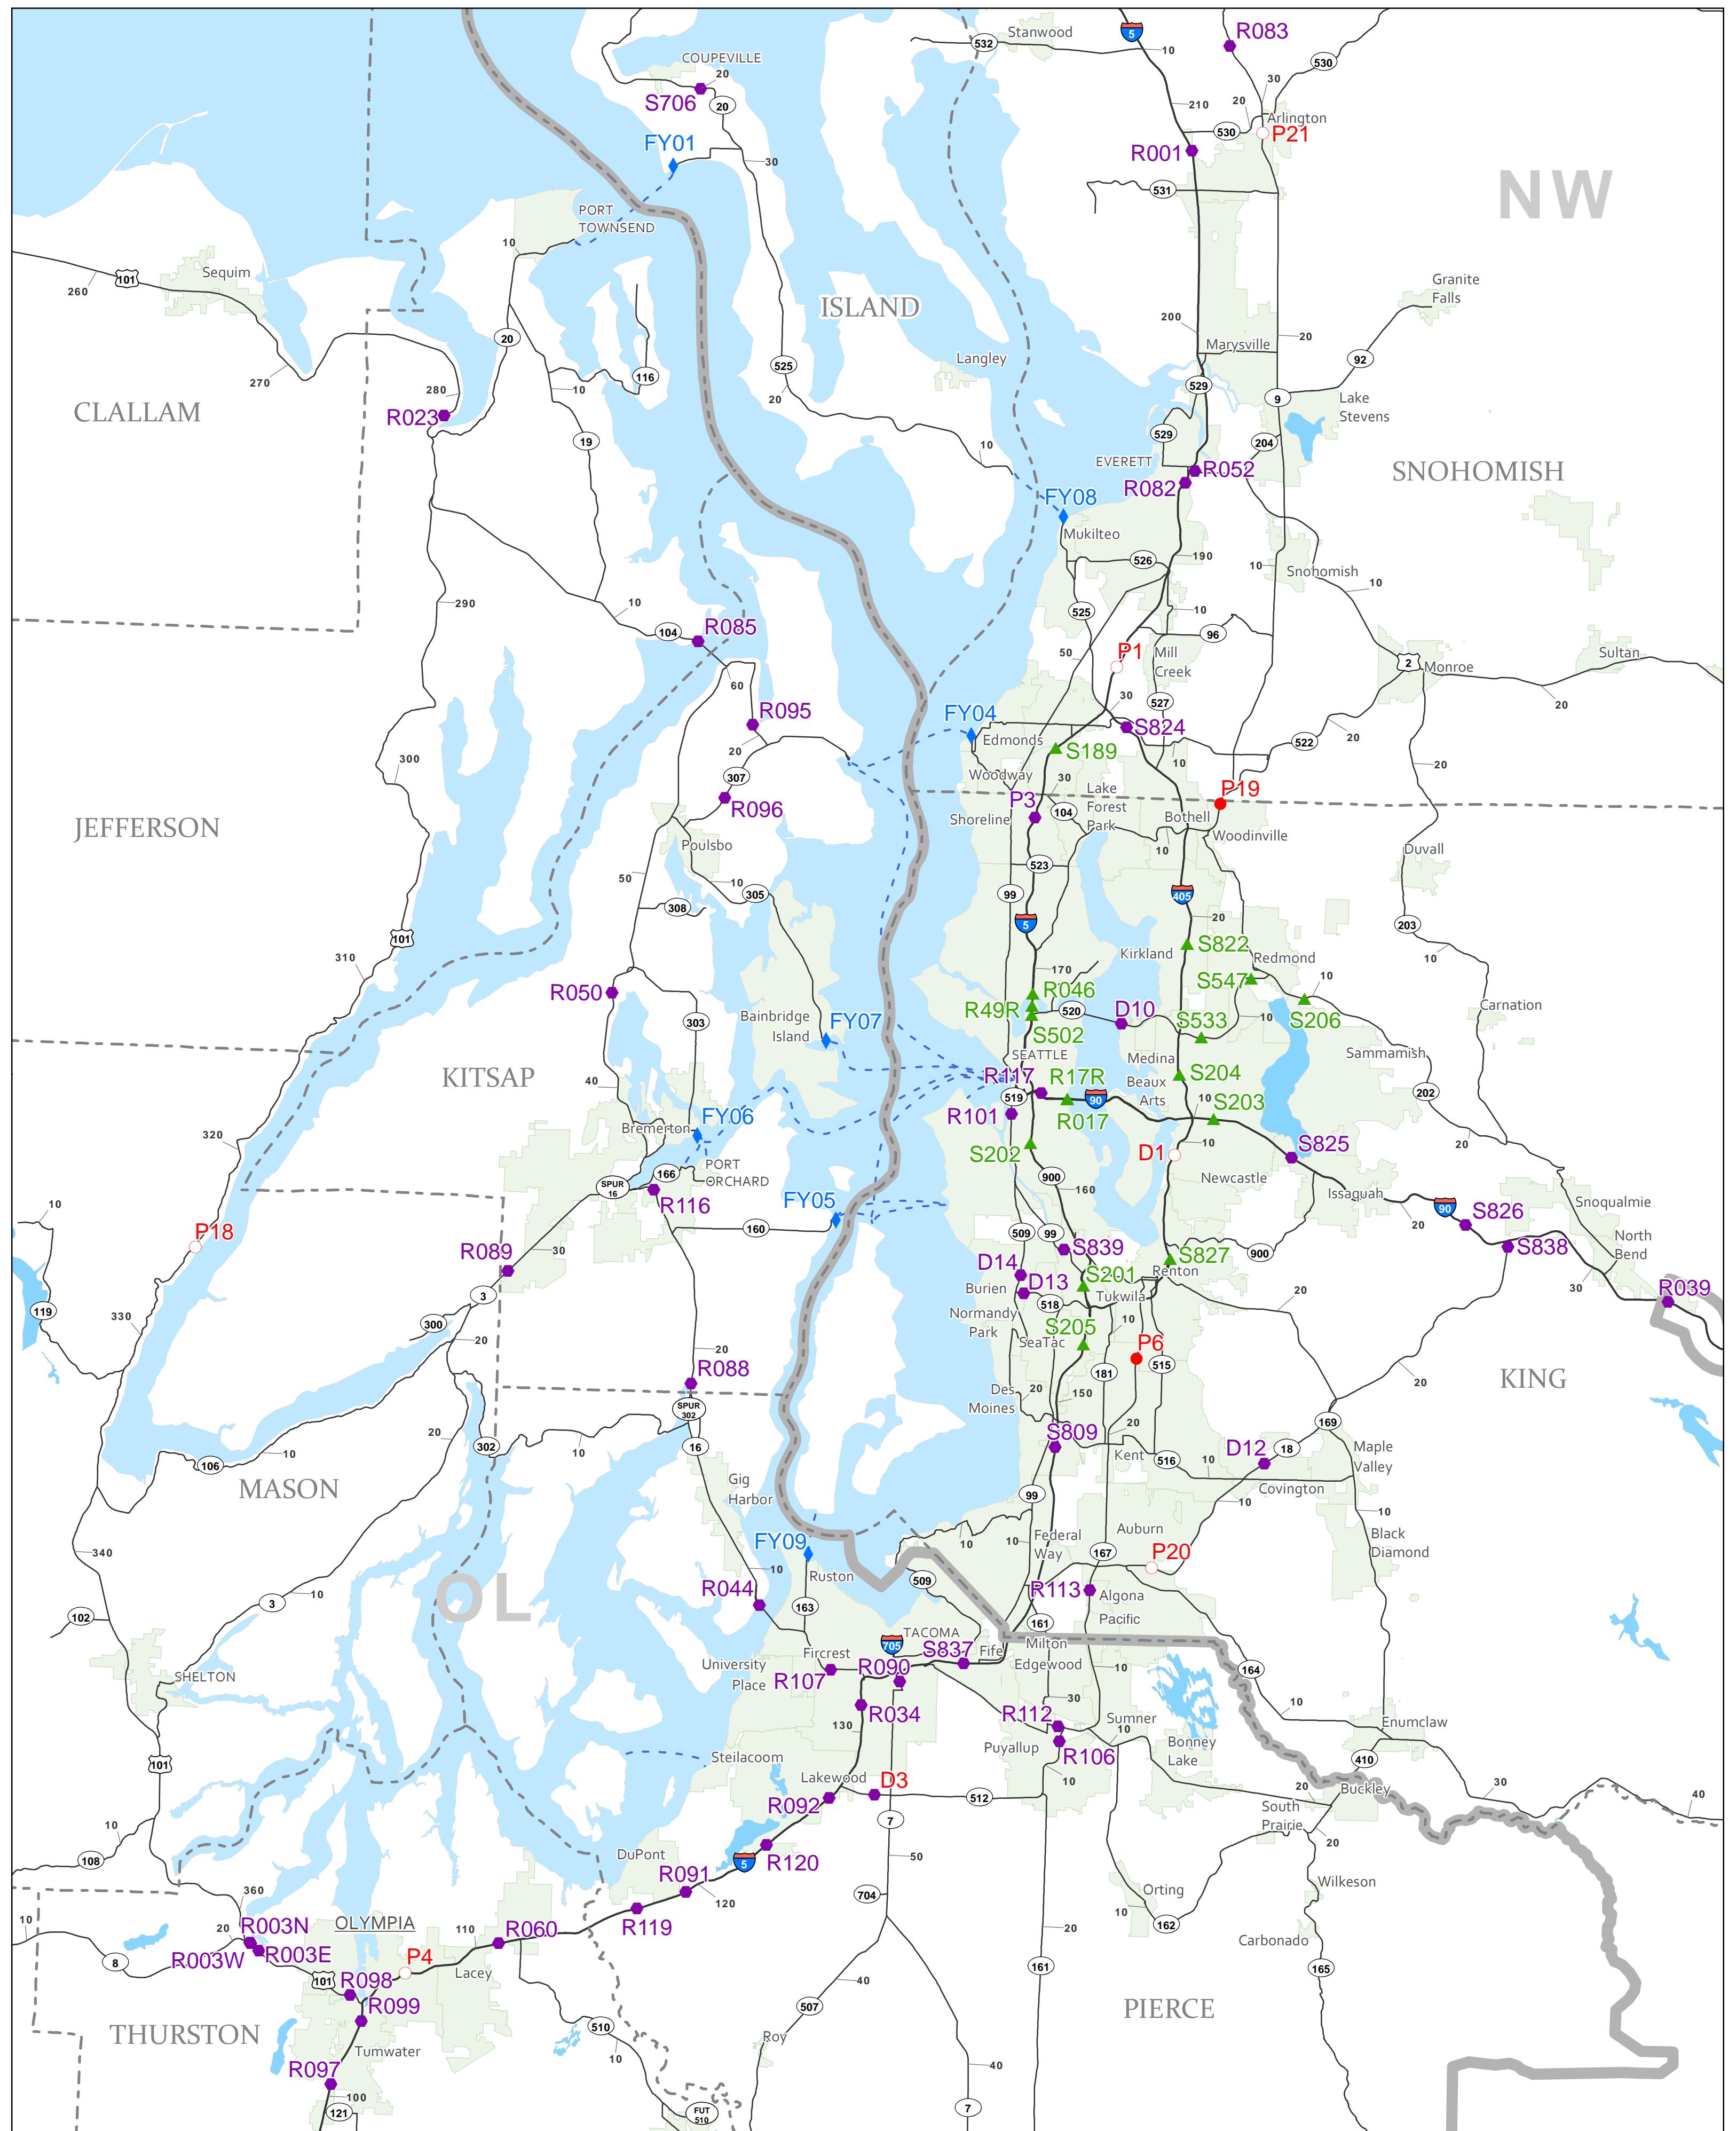

For questions or comments regarding the *Peak Hour Report*, please contact the Automated Data Collection Section by email at tdgoadc@wsdot.wa.gov or call 360-570-2392.

GLOSSARY

ADC Automated Data Collection
ADT Average Daily Traffic (An average 24-hour traffic volume at a given location for some period of time less than a year. An ADT may be measured for six months, a season, a month, a week, or as little as two days. An ADT is a valid number for only the period over which it was measured.)
AADT Annual Average Daily Traffic (The average 24-hour traffic volume at a given location over a full 365-day year—that is, the total number of vehicles passing the site in a year divided by 365.)
PEAK HOURHighest recorded volume hours for the year
K FACTORThe proportion of daily traffic occurring during the peak hour (Expressed as a decimal)
K 30 FACTORThe proportion of daily traffic occurring during the 30 th peak hour (Expressed as decimal)
K 50 FACTORThe proportion of daily traffic occurring during the 50 th peak hour (Expressed as a decimal)
K 100 FACTORThe proportion of daily traffic occurring during the 100 th peak hour (Expressed as a decimal)
K 200 FACTORThe proportion of daily traffic occurring during the 200 th peak hour (Expressed as a decimal)
D FACTORThe proportion of peak-hour traffic traveling in the peak direction (Expressed as a decimal)
DDHVDirectional design hour volume
